Contribution Estimates

There are several sources used to generate contribution estimates to the commercial and terminal fisheries of Southern Southeast Regional Aquaculture Association's (SSRAA) programs. Chinook and Coho salmon numbers are based on coded wire tags (CWT's). ADF&G runs a port sampling program to collect and generate catch estimates throughout the season. Fish and Game also runs a sport recovery program that is used to estimate most of the SSRAA production to the sport catch. This recovery program ends prior to the peak of SSRAA enhanced Coho returning to inside waters, so an adjustment is made using historical data to capture the missing time periods. Sockeye catch is estimated using Fish and Game's otolith data base. SSRAA runs its own otolith port sampling program and data base to generate chum contribution estimates in districts 101 through 108. And lastly, fish ticket information is tabulated by Fish and Game to estimate catch in the Special Harvest Areas.

In the traditional fisheries, data from each gear is handled somewhat differently. The Troll data is expanded by Quadrant and period. Gillnet data is expanded by district and stat week. And Seine data is expanded by Seine Areas over eight periods. The tables below show Troll Quadrants and Seine Area equivalents.

Abbreviation	Quadrant	Districts Included
NW	Northwest	113 ,114 ,116 ,154-157, 181-189, 191, 192
NE	Northeast	109, 110, 111, 112, 115
SW	Southwest	103, 104, 150, 152
SE	Southeast	101, 102, 105, 106, 107, 108

Abbreviation	Seine Area	Districts Included
SASI	Southern Inside	101, 102
SASO	Southern Outside	103, 104
SACI	Central Inside	105, 106, 107
SACO	Central Outside	109, 110
SA11, SA12, SA13, etc...	111, 112, 113, etc...	111,112, 113, etc...
